

Herbert W. Franke VISIONÄR

Text: [Susanne Päch](#) | Section: [Articles about Artists](#) | Series: Exhibitions

Summary: In 2022, the Upper Austrian State Museum Francisco Carolinum is hosting the exhibition Visionär (Visionary) about Herbert W. Franke, one of the most important border-crossers between science and art. Franke is a physicist and speleologist, one of the founders of computer art and math art, and a leading figure in German science fiction literature. He has also developed a rational theory of art. At the interface between science and art, there are few who are as multifaceted as he is.
